Downloading from GitHub

No technical experience is needed — everything below is exactly what you will see. It tells you precisely what to do.

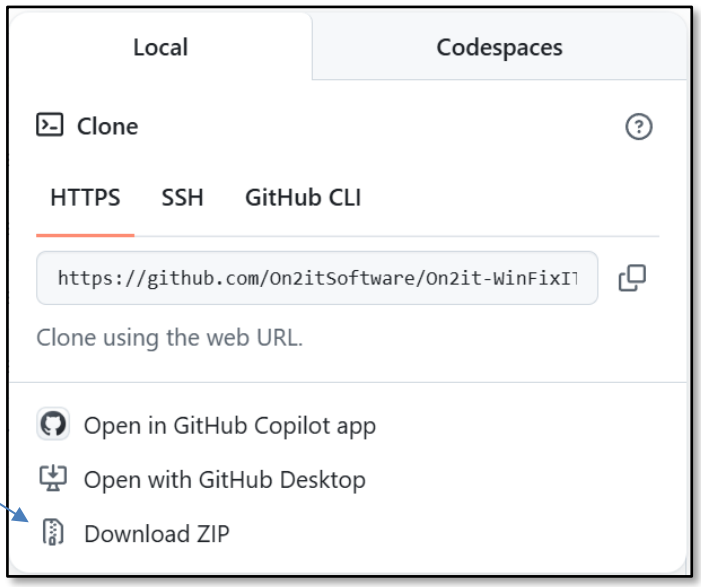

1. Ctrt+Click https://github.com/On2itSoftware/On2it-WinFixIT
   It will open in your Browser like **this**:

   (If you are already in GitHub, you don't need to do it again. 😊)

2. Near the top of the page, click the **<> Code** button,

3. Then click **Download ZIP**.

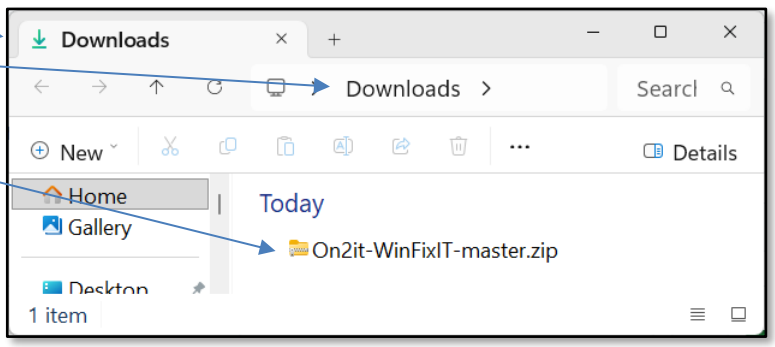

It will download to your **Downloads** folder as a .zip file

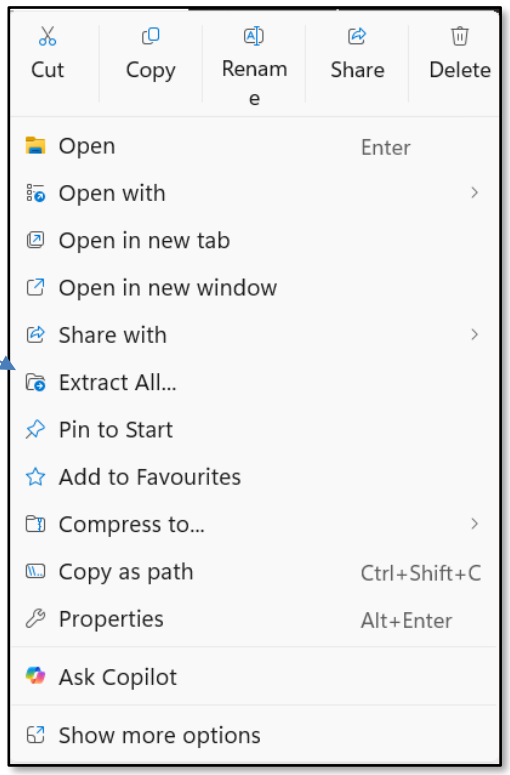

4. You can Open your Downloads Folder, either by:
   a. Clicking the **Folder** Icon, or
   b. Opening **File Manager** and going to **Downloads.**

   In Downloads you will see **On2it-WinFixIT-master.zip**

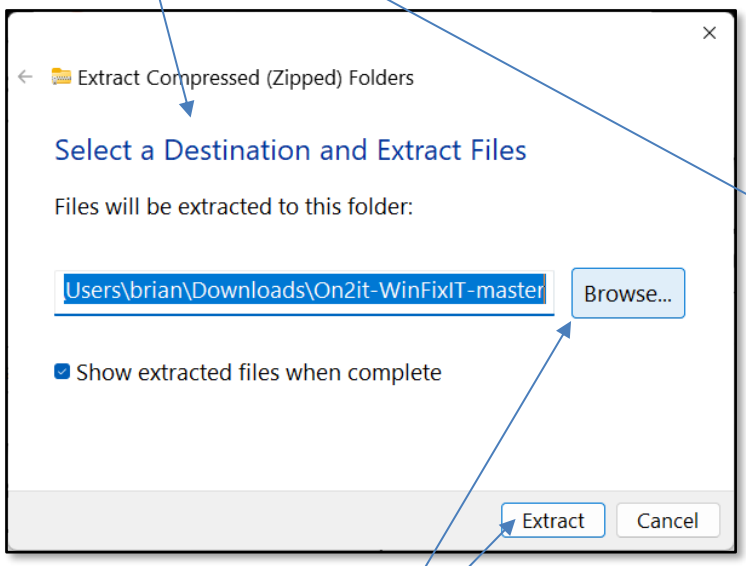

© On2it Software Ltd

5. In File Manager right-click **On2it-WinFixIT-master.zip** and choose **Extract All**

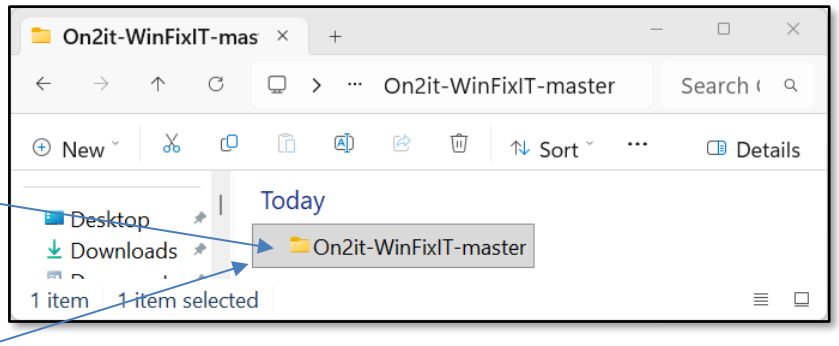

This will **display**:

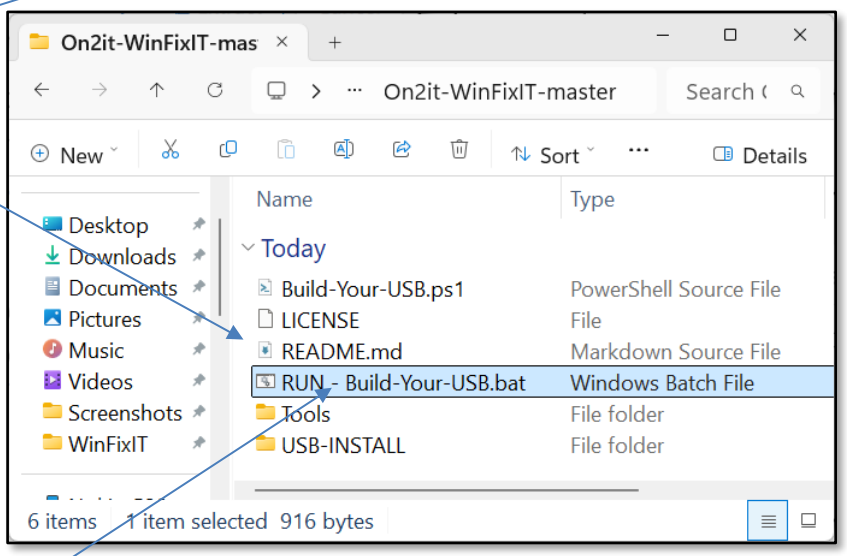

You can, of course, use the **Browse** Button to extract your Files wherever you like, or just leave them in the Downloads Folder.

6. Then click **Extract**. This will create a **Sub-Folder** with your files in it.

7. Double-click the **Sub-Folder** to see **what's in it**.

8. Insert a 32GB or larger USB drive that you're OK with **completely erasing**.

   If you don't want installation files on your USB, you can reduce this to a 16GB USB.

9. Double-Click **RUN - Build-Your-USB.bat** to build your USB. 😊

© On2it Software Ltd

Building Your USB

Having double-clicked RUN - Build-Your-USB.bat you will **see**:

Click **Run** (or **Open**) to continue — this is normal for any downloaded program, not a sign anything's wrong.

Downloading your files

This will initiate a somewhat large download. Initially, you will **see**:

```
================================================================================
                    On2it WinFixIT - Build Your Own USB
================================================================================

First we need to download:
   - On2it-WinFixIT.zip,
   - USB-INSTALL-Scripts.zip,
   - USB-INSTALL-Boot.zip.

Downloading On2it-WinFixIT.zip (1.2 GB, this will take a while)...
Found a previous version at:
  C:\On2it-WinFixIT-USB-Build\On2it-WinFixIT.zip, dated 2026-09-26 18:50:59

Would you like to Re-use it or Download again? (R/D): D
On2it-WinFixIT Partition - 1.2 GB contains:
   Multiple Application & Utility Apps,
   AI Tools,
   Documentation & Reference Library +
   + Our LIBRARY Menu files
(The two Windows ISOs are built separately, straight from Microsoft – see below.)
Feel free to leave it running in the background.  An estimated time remaining will appear shortly.
.........................
```

This is a lot faster than it used to be as we have trimmed the download from nearly 20GB to only 1.2GB.

Below the filename there is a **brief explanation** of what it contains.

As the file downloads a **row of dots** will display across the screen. Every minute the **time remaining** will display below the row of dots, which will then reset to the beginning. (Once the estimate is going down by a minute, every minute, it is a good indication that the estimate is becoming reliable.

When it has downloaded you will **see**:

```
Download complete.

Verifying Hash Total for On2it-WinFixIT.zip to ensure it was downloaded correctly...
Hash verified OK.
```

If for any reason the Hash Total for the ZIP file does not agree, you will see a red error message saying:

On2it-WinFixIT.zip failed its integrity check (checksum mismatch) -- the download is likely corrupted or incomplete. The bad file has been deleted; just re-run this script to try again.

Otherwise, you will see:

Hash verified OK.

© On2it Software Ltd

There is another two ZIP Files to download. they are a lot smaller and download quite quickly. They too explain what they contain.

```
  Downloading USB-INSTALL-Scripts.zip (1 MB)...
  Found a previous version at:
    C:\On2it-WinFixIT-USB-Build\USB-INSTALL-Scripts.zip, dated 2026-09-26 18:51:00

  Would you like to Re-use it or Download again? (R/D): D
  (This is the logic that drives the system.)
...

  Download complete.

  Verifying Hash Total for USB-INSTALL-Scripts.zip to ensure it was downloaded correctly...
  Hash verified OK.

  Downloading USB-INSTALL-Boot.zip (499 MB)...
  Found a previous version at:
    C:\On2it-WinFixIT-USB-Build\USB-INSTALL-Boot.zip, dated 2026-09-26 18:51:02

  Would you like to Re-use it or Download again? (R/D): D
  (Microsoft WinPE, which enables WinFixIT to run without a full OS.)
..........

  Download complete.

  Verifying Hash Total for USB-INSTALL-Boot.zip to ensure it was downloaded correctly...
  Hash verified OK.
```

Downloading Windows Installation ISOs

We now download Windows 11 installation media direct from Microsoft, to ensure you get the latest official version. Initially you will see:

```
 Do you want to be able to install Windows 11 from this USB?
 (Compatibility Checker, DeBloater and the Library all work either way.)
 Include Windows install media? (Y/N):
```

So, you don't have to download, if you don't want to install Windows 11 from your USB, you will still be able to use WinFixIT's Compatibility Checker, DeBloater and Library anyway.

If you answer Y and both ISOs were created earlier, you will be given the option of reusing them.

```
 I already have a:
      FULL Install.iso    created 1 day ago
      BYPASS Install.iso  created earlier today, at 6:50 PM
 Would you like to Re-use them or create New ones? (R/N): R

 FULL Install.iso already present -- re-using it.
 BYPASS Install.iso already present -- re-using it.
```

If they don't exist or you choose to create new ones, you will be given the following explanation of your choices:

```
We can either do it for you.  We will:
   - Build 'FULL Install.iso' by downloading Microsoft's latest version
     of Windows 11, direct from Microsoft themselves.
     These are never downloaded from us or shipped in this repo.  Microsoft doesn't
     allow redistributing Windows media, so your own copy is built afresh instead.
   - Use it to create a 'BYPASS Install.iso',
     which bypasses Windows 11's TPM 2.0, Secure Boot, and supported-CPU checks
     by removing sources\appraiserres.dll.  This is the same mechanism Rufus's
     'Extended Windows 11 Installation' option uses.  RAM and storage are
     already checked separately by WinFixIT's own Compatibility Checker.
     The Microsoft-account/internet-connection requirement during setup
     isn't bypassed here either, as WinFixIT's DeBloater already lets you
     disable or remove that requirement post-install.
   - and an 'ISO Descriptions.txt' file,
     which will record how they were created, together with details of what was bypassed.
These will all be created in the Install\Windows folder of the On2it-WinFixIT partition of the USB

OR you can do it for yourself, by either:
   - using an existing Windows.iso if you already have one, or
   - we will tell you how to use Microsoft's Media Creation Tool to create one.
     That way you cane be assured it is 100% genuine and unmodified, direct from Microsoft themselves

WinFixIT will still build 'BYPASS Install.iso' and 'ISO Descriptions.txt' from it for you.

So, what do you want to do?
  D = Download automatically from Microsoft  (downloads ~4.7 GB)
  S = Supply a 'FULL Install.iso' yourself.
Download/Supply? (D/S): _
```

© On2it Software Ltd

You will then be given the options of:

- **Download automatically from Microsoft**, or
- **Supply a 'FULL Install.iso' yourself**.

If you choose to download from Microsoft and they do not respond, you may see instead:

```
  Asking Microsoft for the current official Windows 11 ISO download link...
  Building BYPASS Install.iso from the official ISO...
    Copying installation files out to build the bypass version...
......
    Packaging the bypass version as an ISO (this can take a few minutes)...
  BYPASS Install.iso built.

        If so, this may not clear quickly, and isn't something this script can work around.
    (2) Microsoft may have changed something this script's automatic-download step relies on,
        and it may need an update.

  Either way, you can still build this USB right now:

    (1) If you already have a Windows 11 ISO that you wish to use, then you can use that:

    (2) If not then use Microsoft's Media Creation Tool to create one.
        1. Leave this Window open for reference, and in your browser, go to:
           https://www.microsoft.com/software-download/windows11
        2. Scroll to the 'Create Windows 11 Installation Media' section
           (NOT 'Windows 11 Installation Assistant' - that's for a different purpose).
        3. Click its 'Download Now' button. This downloads a file called
           MediaCreationToolW11.exe to your Downloads folder.
        4. Double-click MediaCreationToolW11.exe to run it. Click Yes if
           Windows asks for permission.
        5. Click Accept on the licence terms screen.
        6. Choose 'Create installation media (USB flash drive, DVD, or ISO file) for another PC',
           then click Next.
        7. Leave 'Use the recommended options for this PC' ticked, then Next.
        8. Choose 'ISO file' (NOT 'USB flash drive'), then click Next.
        9. Choose where to save it (e.g. your Desktop), then click Save.
           This downloads Windows and builds the ISO - it can take a while.
       10. When it finishes, click Finish.

      Rename your ISO file to exactly:
          FULL Install.iso
      and move it into:
          C:\On2it-WinFixIT-USB-Build\On2it-WinFixIT\Install\Windows

      Your 'FULL Install.iso' will be used to create a 'BYPASS Install.iso' for you,
      bypassing its TPM 2.0, Secure Boot, and supported-CPU checks.

  Press Enter once it's there:
```

Simply carry out the additional instructions displayed. Once you have your **FULL Install.iso** in place and press **Enter**, processing will continue as follows:

Selecting your USB

If you have more than one USB plugged in you will **see**:

```
  Available USB disks:

Drive No Name                 Size
----- -- ----                 ----
   F:  6 VendorCo ProductCode 29.3 GB
   G:  5 VendorCo ProductCode 14.6 GB

  Enter disk NUMBER of the target USB drive: 6

  Disk 6 already has 1 partition(s) on it.
  It contains:
          System Volume Information,
          01 - Intro to PCs.docx,
          02 - Mouse and Windows.docx,
          03 - Applications and Documents.docx,
          04 - Creating a Filing System.docx, ...

  Are you sure this is the right drive? (Y/N): Y
```

You now need to select which of these drives you intend to use. The top one is a 32 GB Drive. (Remember Microsoft say 1 MB = 1,024 Bytes. Drive manufacturers say 1 MB = 1,000 Bytes – hence the discrepancy.) That's the size we recommend if you want to install multiple applications from the USB, or add significant amounts of your own content. The smaller one is a 16 GB drive. That's big enough, if all you want to install from the USB is Windows.

You have to **Enter disk NUMBER of the target USB drive**.

If there is data on the USB, you will be given a sample of what's on it, in case you elected the wrong one. You will then be asked **Are you sure this is the right drive?**

© On2it Software Ltd

Partitioning the USB

The USB will be divided into two partitions. Both of which will get their own drive letter in File Manager:

- **USB-INSTALL** has to be a FAT32 partition as it houses WinPE, which it needs to run WinFixIT without any OS on the computer. It also holds WinFixIT's Scripts – WinFixIT's logic.
- **On2it-WinFixIT** holds everything else – notably any installation and LIBRARY Menu files. This is formatted as NTFS to overcome the file size limitation of FAT32.

```
Checking downloaded content sizes...

Only one suitable USB disk found: Disk 5  VendorCo ProductCode  (29.3 GB) - using it.

Disk 5 already has 2 partition(s) on it.
Partition names on it:
        USB-INSTALL (X:)
        On2it-WinFixIT (W:)

Are you sure this is the right drive? (Y/N): Y

Target  : Disk 5  VendorCo ProductCode  (29.3 GB)
Layout  :
  P1  USB-INSTALL              1024 MB   FAT32 (read-only after copy)
  P2  On2it-WinFixIT          28926 MB   NTFS

Scripts folder will be HIDDEN on this USB (same as the in-house build).

WARNING: ALL DATA ON DISK 5 WILL BE PERMANENTLY DESTROYED.

Type YES to continue: YES
```

You are then advised how your Partitions on the drive will be set up, and warned:

WARNING: ALL DATA ON DISK X WILL BE PERMANENTLY DESTROYED.

You will have to **Type YES to continue:** you will have to type "**YES**" - Y or y will NOT do.

Once you have said **YES**, your USB will be partitioned and formatted, as follows

```
Partitioning.................

  Partition 1 'USB-INSTALL'     formatted with    1,024 MB (FAT32)
  Partition 2 'On2it-WinFixIT'  formatted with   28,926 MB (NTFS)
```

Copying files to USB

Copying files to USB looks like this:

```
Creating USB-INSTALL...
.....
Adding WinPE boot files...
.....................................................................................
Adding Scripts (will be hidden)...
..
Creating On2it-WinFixIT... (15 GB)
Adding 2 large files first (no live progress within each -- please wait)...
Adding BYPASS Install.iso (6,811 MB)...
.....................................................................................
.....................................................................................
.....................................................................................
.....................................................................................
Adding FULL Install.iso (6,810 MB)...
.....................................................................................
.....................................................................................
.....................................................................................
.....................................................................................

Adding remaining files... (1,741 MB)
.....................................................
1,360 MB copied so far (about 3 min remaining)
```

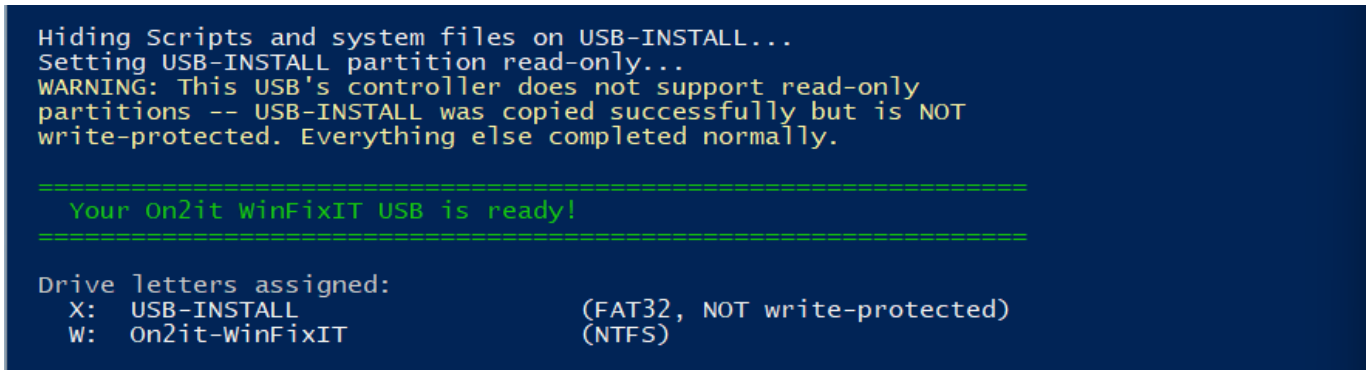

Most of the time is taken copying the Windows 11 installation files:

- **BYPASS Install.iso** bypasses Windows' usual requirement for a TPM 2, Secure Boot and UEFI.
- **FULL Install.iso** does a FULL Install of Windows with all of Windows Security features.

© On2it Software Ltd

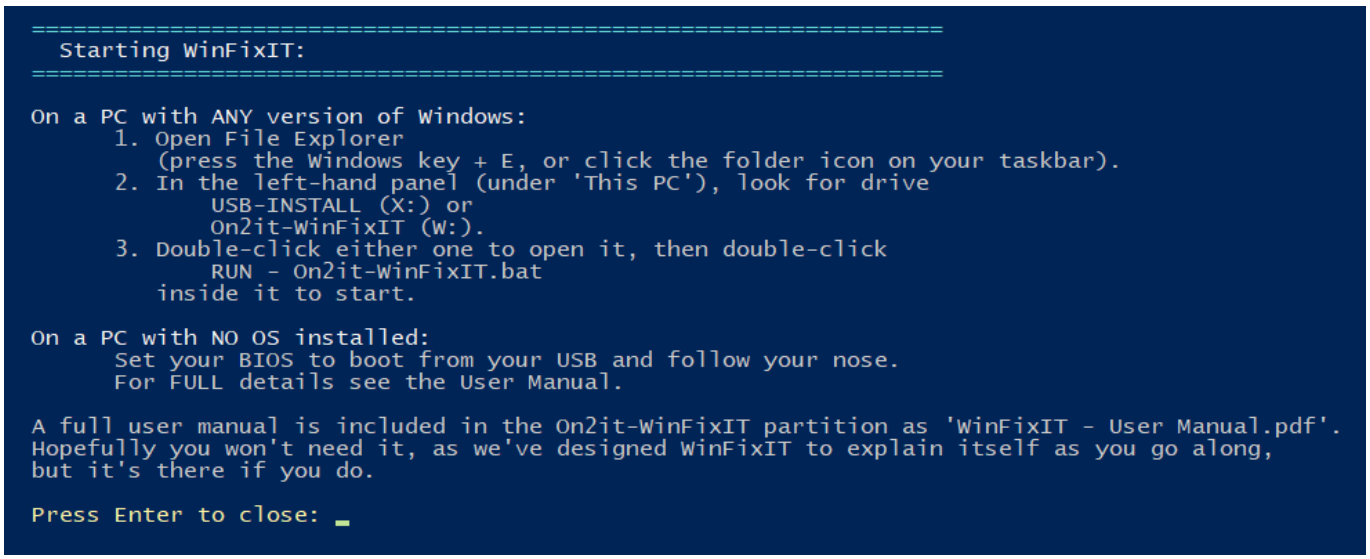

Finalising the USB

The Scripts and System Files on USB-INSTALL will be hidden to prevent them being accidentally altered. An attempt will also be made to make the USB-INSTALL Partition read-only, for the same reason. But many USB controllers do not support this. So, you will see the yellow message below.

Starting WinFixIT

You will then see:

© On2it Software Ltd
